

# ISL78236CRSHEVAL1Z Current Share Evaluation Board User Guide

## Description

The ISL78236CRSHEVAL1Z kit is intended for use by individuals with requirements for Point-of-Load (POL) applications sourcing from 2.85V to 6V. The ISL78236CRSHEVAL1Z evaluation board is used to demonstrate the performance of the ISL78236 low quiescent current mode converter in current sharing configuration. The evaluation board is configured to deliver up to 6A output current with both outputs paralleled together. The ISL78236 can also be used in dual output 3A/3A configuration. For this application, reference ISL78236DUALEVAL1Z [AN1927](#).

The ISL78236 is offered in a 4mmx4mm 24 Ld QFN package with 1mm maximum height. The complete converter occupies less than 5.46cm<sup>2</sup> area.

## Key Features

- Current sharing 6A high efficiency synchronous buck regulator with up to 95% Efficiency
- 180° out-of-phase channel switching
- 2% output accuracy over-temperature/load/line
- Externally adjustable soft-start time
- Soft-stop output discharge during disabled
- External synchronization up to 6MHz
- Typical 8µA shutdown current
- 100% maximum duty cycle for lowest dropout
- External current mode compensation
- Peak current limiting, hiccup mode short circuit protection and over-temperature protection
- Negative current detection and protection

## Recommended Equipment

The following materials are recommended to perform testing:

- 5V or higher power supply with at least 6A source current capability or 5V battery
- Electronic loads capable of sinking current up to 7A
- Digital Multimeters (DMMs)
- 100MHz quad-trace oscilloscope
- 10MHz signal generator

## Ordering Information

PART NUMBER	DESCRIPTION
ISL78236CRSHEVAL1Z	Current Sharing 6A Synchronous Buck Evaluation Board

## Quick Setup Guide

1. Ensure that the evaluation board is correctly connected to the supply and loads prior to applying any power.
2. Connect the bias supply to VIN: The positive terminal to VIN1 and the negative return to PGND1.
3. Verify that switch position is on PWM for S1. Verify that switch position is ON for S2 and S3.
4. Turn on the power supply.
5. Verify the output voltage is 1.8V for V<sub>OUT1</sub>, V<sub>OUT2</sub>.

## Evaluating Other Output Voltages

The ISL78236CRSHEVAL1Z kit output is preset to 1.8V (V<sub>OUT1</sub> = V<sub>OUT2</sub>); however, output voltage can be adjusted from 1.2V to 3.3V. The output voltage programming resistor, RF22, will depend on the desired output voltage of the regulator. The value for the feedback resistor is typically between 50kΩ and 750kΩ, as shown in [Equation 1](#).

Setting RF21 = 100kΩ, then RF22 will be:

$$RF22 = RF21 \left( \frac{V_{OUT}}{0.8} - 1 \right) \quad (EQ. 1)$$

## Mode Control

The ISL78236 has a SYNC pin, which connects to logic high or input voltage VIN for internal 2.5MHz switching frequency. Connect the test point by the switch S1 to an external function generator for external synchronization on the negative edge trigger. A 100kΩ pull-up resistor to VIN normally pulls the SYNC pin high. Each channel's switching frequency will be 1/2 of the synchronization frequency at 180° out-of-phase. Synchronization frequency range is 6MHz to 8MHz. Do not leave this pin floating. Do not tie this pin low (or to GND)

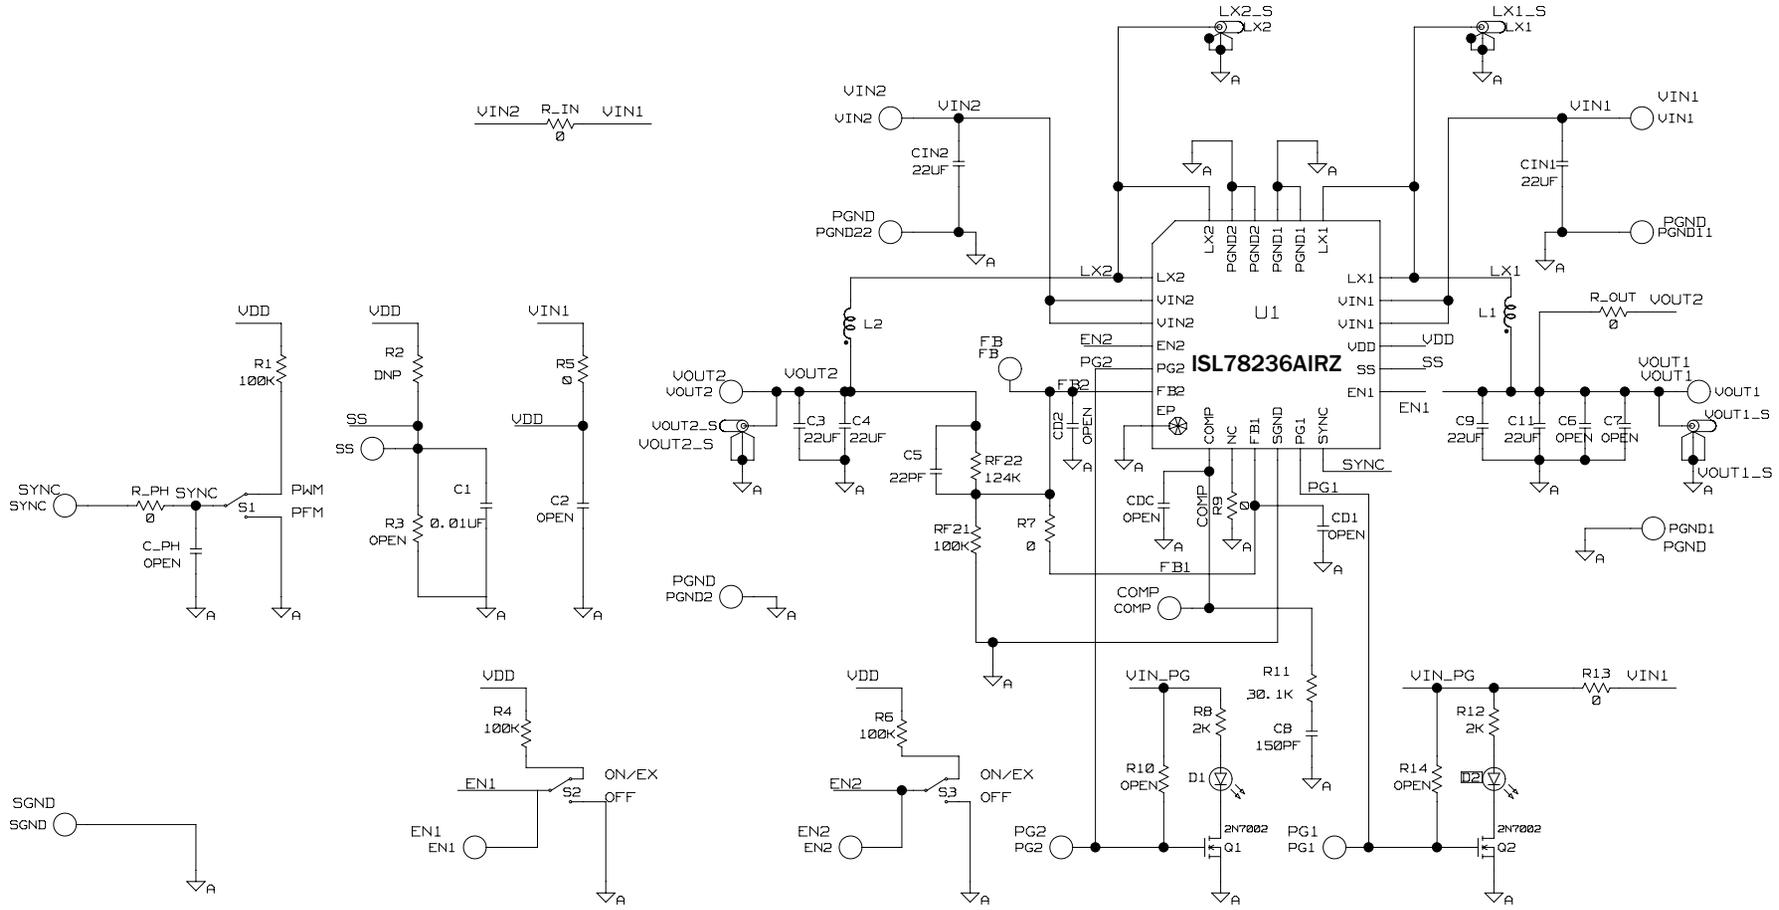

## Enable Control

EN1 and EN2 pins should be tied together for current sharing operation.

**TABLE 1. SWITCH SETTINGS**

SWITCH	POSITION	MODE
S1	PFM	DO NOT LEAVE IN THIS POSITION
	PWM	2.5MHz switching frequency if floating. External synchronization switching 6MHz to 8MHz range with generator.
S2/S3	ON	Enable V <sub>OUT</sub> . Both must be in ON state.
	OFF	Disable V <sub>OUT</sub> .
