LITEON®
OPTOELECTRONICS

Through Hole Lamp

Product Data Sheet

LTL-30EHJH96

Spec No.: DS20-2001-261

Effective Date: 10/02/2013

Revision: A

LITE-ON DCC

RELEASE

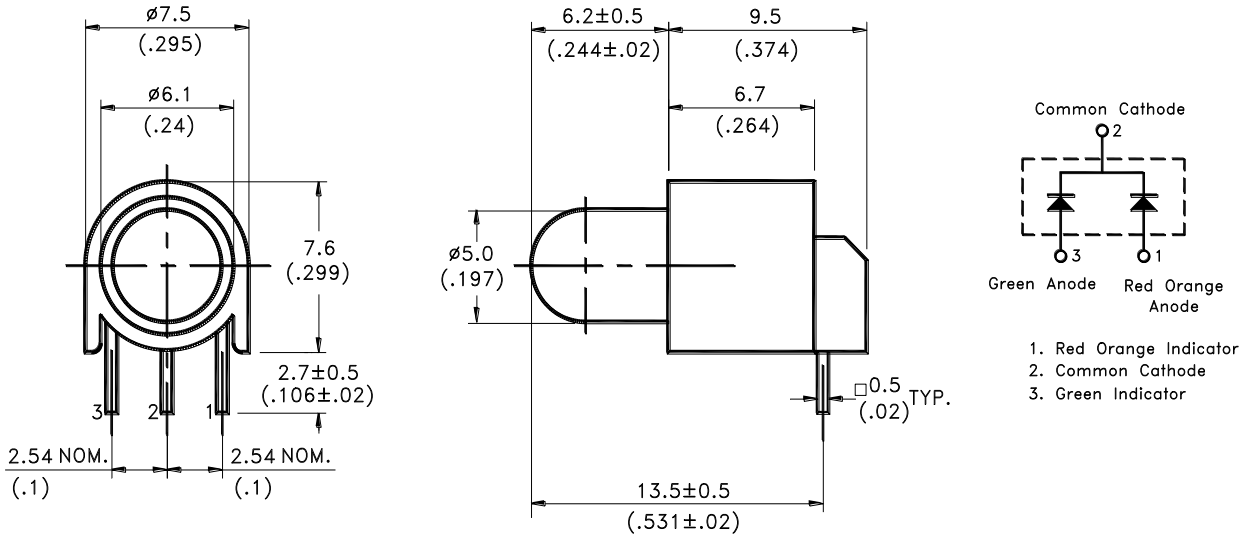
BNS-OD-FC001/A4

LITE-ON Technology Corp. / Optoelectronics
No.90,Chien 1 Road, Chung Ho, New Taipei City 23585, Taiwan, R.O.C.
Tel: 886-2-2222-6181 Fax: 886-2-2221-1948 / 886-2-2221-0660
http://www.liteon.com/opto

Features

* Lead (Pb) free product – RoHS compliant.
* Low power consumption.
* Designed for ease in circuit board assembly.
* Long life solid state reliability.
* Reliable and rugged.

Package Dimensions



Part No.	Lens	Source Color
LTL-30EHJH96	White Diffused	Red Orange / Green

Notes:

1. All dimensions are in millimeters (inches).
2. Tolerance is ±0.25 mm(.010") unless otherwise noted.
3. The Holder (Housing) is 46L096, PC black.
4. The LED lamp is LTL-30EHJ.
5. Specifications are subject to change without notice.

Absolute Maximum Ratings at T_A=25℃

Parameter	Red Orange	Green	Unit
Power Dissipation	100	100	mW
Peak Forward Current (1/10 Duty Cycle, 0.1ms Pulse Width)	90	90	mA
DC Forward Current	30	30	mA
Derating Linear From 50℃	0.4	0.4	mA/℃
Reverse Voltage	5	5	V
Operating Temperature Range	-55℃ to + 100℃		
Storage Temperature Range	-55℃ to + 100℃		
Lead Soldering Temperature [2 mm(.078") From Body]	260℃ for 5 Seconds Max.		

Electrical Optical Characteristics at T_A=25℃

Parameter	Symbol	Color	Min.	Typ.	Max.	Unit	Test Condition
Luminous Intensity	Iv	Red Orange Green	14 12.6	40 29	60 100	mcd	I_F = 20mA I_F = 20mA Note 1,4
Viewing Angle	$2\theta_{1/2}$	Red Orange Green		30 30		deg	Note 2 (Fig.6)
Peak Emission Wavelength	λp	Red Orange Green		630 565		nm	I_F = 20mA Measurement @Peak (Fig.1)
Dominant Wavelength	λd	Red Orange Green	615 567	625 572	632 577	nm	I_F = 20mA Note 3
Spectral Line Half-Width	$\Delta \lambda$	Red Orange Green		40 30		nm	I_F = 20mA
Forward Voltage	V_F	Red Orange Green		2.0 2.1	2.6 2.6	V	I_F = 20mA
Reverse Current	I_R	Red Orange Green			100	μA	V_R = 5V,Note 5

Note: 1. Luminous intensity is measured with a light sensor and filter combination that approximates the CIE (Commission International De L'Eclairage) eye-response curve.

2. $\theta_{1/2}$ is the off-axis angle at which the luminous intensity is half the axial luminous intensity.

3. The dominant wavelength, λ_d is derived from the CIE chromaticity diagram and represents the single wavelength which defines the color of the device.

4. The Iv guarantee should be added ±15%.

5. Reverse voltage (V_R) condition is applied for IR test only. The device is not designed for reverse operation.

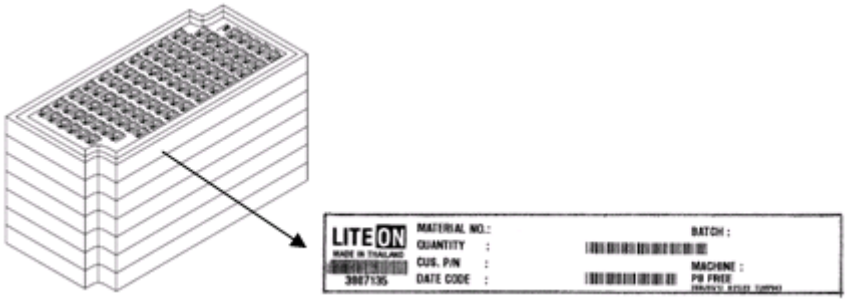
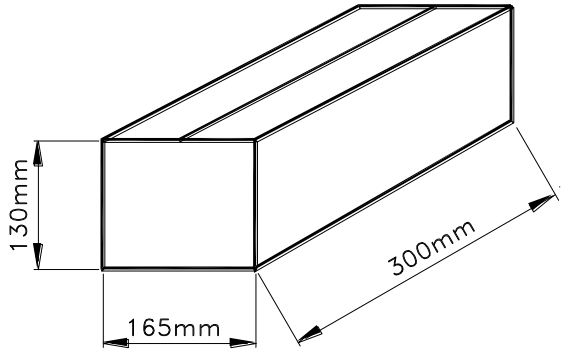
Packing Spec

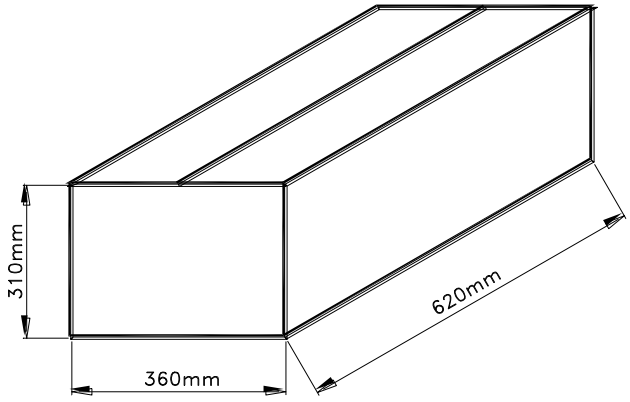
90 pcs per packing trays



10 packing bags per inner carton
total 900 pcs per inner carton



8 Inner cartons per outer carton
total 7200 pcs per outer carton
In every shipping lot, only the last pack will be non-full packing



Bin Table Specification

Luminous Intensity (Red Orange) Unit: mcd @20mA		
	Min.	Max.
IV	14	19
	19	29
	29	60

Note: Tolerance of each bin limit is ±15%

Luminous Intensity (Green) Unit : mcd @20mA		
	Min.	Max.
IV	12.6	29
	29	40
	40	100

Note: Tolerance of each bin limit is ±15%

Bin Table Specification

Bin Code	Luminous Intensity (Green) Unit : mcd @20mA		Luminous Intensity (Red Orange) Unit : mcd @20mA	
	Iv Green		Iv Red Orange	
	Min.	Max.	Min.	Max.
9	12.6	29	14	19
8	12.6	29	19	29
7	12.6	29	29	60
6	29	40	14	19
5	29	40	19	29
4	29	40	29	60
3	40	100	14	19
2	40	100	19	29
1	40	100	29	60

Note: Tolerance of each bin limit is ±15%

CAUTIONS

1. Application

The LEDs described here are intended to be used for ordinary electronic equipment (such as office equipment, communication equipment and household applications).Consult Liteon's Sales in advance for information on applications in which exceptional reliability is required, particularly when the failure or malfunction of the LEDs may directly jeopardize life or health (such as in aviation, transportation, traffic control equipment, medical and life support systems and safety devices).

2. Storage

The storage ambient for the LEDs should not exceed 30°C temperature or 70% relative humidity.
It is recommended that LEDs out of their original packaging are used within three months.
For extended storage out of their original packaging, it is recommended that the LEDs be stored in a sealed container with appropriate desiccant or in desiccators with nitrogen ambient.

3. Cleaning

Use alcohol-based cleaning solvents such as isopropyl alcohol to clean the LEDs if necessary.

4. Lead Forming & Assembly

During lead forming, the leads should be bent at a point at least 3mm from the base of LED lens.
Do not use the base of the leadframe as a fulcrum during forming.
Lead forming must be done before soldering, at normal temperature.
During assembly on PCB, use minimum clinch force possible to avoid excessive mechanical stress.

5. Soldering

When soldering, leave a minimum of 2mm clearance from the base of the lens/Holder to the soldering point.
Dipping the lens/Holder into the solder must be avoided.
Do not apply any external stress to the lead frame during soldering while the LED is at high temperature.

Recommended soldering conditions :

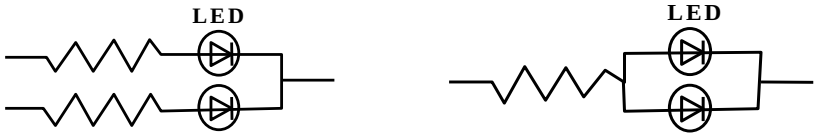
Soldering iron		Wave soldering	
Temperature Soldering time	350℃ Max. 3 sec. Max. (one time only)	Pre-heat Pre-heat time Solder wave Soldering time	100℃ Max. 60 sec. Max. 260℃ Max. 5 sec. Max.

Note: Excessive soldering temperature and/or time might result in deformation of the LED/Holder or catastrophic failure of the CBI. IR (Hot air) reflow is not suitable process for through hole type LED lamp product .Max temperature of waive soldering is not mean that Holder's HDT/Melting temperature.

6. Drive Method

An LED is a current-operated device. In order to ensure intensity uniformity on multiple LEDs connected in parallel in an application, it is recommended that a current limiting resistor be incorporated in the drive circuit, in series with each LED as shown in Circuit A below.

Circuit model A **Circuit model B**



(A) Recommended circuit

(B) The brightness of each LED might appear different due to the differences in the I-V characteristics of those LEDs

7. ESD (Electrostatic Discharge)

Static Electricity or power surge will damage the LED.

Suggestions to prevent ESD damage:

- Use a conductive wrist band or anti- electrostatic glove when handling these LEDs
- All devices, equipment, and machinery must be properly grounded
- Work tables, storage racks, etc. should be properly grounded
- Use ion blower to neutralize the static charge which might have built up on surface of the LEDs plastic lens as a result of friction between LEDs during storage and handing

ESD-damaged LEDs will exhibit abnormal characteristics such as high reverse leakage current, low forward voltage, or “no light up” at low currents. To verify for ESD damage, check for “light up” and Vf of the suspect LEDs at low currents.

The Vf of “good” LEDs should be >2.0V@0.1mA for InGaN product and >1.4V@0.1mA for AlInGaP product.

Suggested checking list :

Training and Certification

1. Everyone working in a static-safe area is ESD-certified?
2. Training records kept and re-certification dates monitored?

Static-Safe Workstation & Work Areas

1. Static-safe workstation or work-areas have ESD signs?
2. All surfaces and objects at all static-safe workstation and within 1 ft measure less than 100V?
3. All ionizer activated, positioned towards the units?
4. Each work surface mats grounding is good?

Personnel Grounding

1. Every person (including visitors) handling ESD sensitive (ESDS) items wear wrist strap, heel strap or conductive shoes with conductive flooring?
2. If conductive footwear used, conductive flooring also present where operator stand or walk?
3. Garments, hairs or anything closer than 1 ft to ESD items measure less than 100V*?
4. Every wrist strap or heel strap/conductive shoes checked daily and result recorded for all DLs?
5. All wrist strap or heel strap checkers calibration up to date?

   Note: *50V for Blue LED.

Device Handling

1. Every ESDS items identified by EIA-471 labels on item or packaging?
2. All ESDS items completely inside properly closed static-shielding containers when not at static-safe workstation?
3. No static charge generators (e.g. plastics) inside shielding containers with ESDS items?
4. All flexible conductive and dissipative package materials inspected before reuse or recycle?

Others

1. Audit result reported to entity ESD control coordinator?
2. Corrective action from previous audits completed?
3. Are audit records complete and on file?

8. Reliability Test

Classification	Test Item	Test Condition	Reference Standard
Endurance Test	Operation Life	Ta= Under Room Temperature As Per Data Sheet Maximum Rating *Test Time= 1000HRS (-24HRS,+72HRS)	MIL-STD-750D:1026 (1995) MIL-STD-883D:1005 (1991) JIS C 7021:B-1 (1982)
