1.4. Description

The STAC9220 is a high fidelity, 8-channel audio CODEC compatible with the Intel High Definition (HD) Audio Interface. The STAC9220 provides high quality, HD Audio capability to notebook and cost sensitive desktop PC applications.

The STAC9220 provides stereo 24-bit, full duplex resolution supporting sample rates up to 192 KHz by the DAC and ADC. The STAC9220 DAC, ADC and SPDIF In/Out support sample rates of 96 KHz, 48 KHz and 44.1 KHz. Additional sample rates are supported by the driver software.

The STAC9220 support all desired eight channel configurations, including switchable Headphone Out, and Universal Jacks™ functionality for jack detection and re-tasking. The SPDIF interface provides connectivity to Consumer Electronic equipment like Dolby Digital decoders, powered speakers, mini-disk drives or to a home entertainment system. All analog I/O pairs support LINE_IN, LINE_OUT and MIC.

MIC inputs can be programmed with 0/10/20/30/40dB boost. For more advanced configurations, the STAC9220 has three General Purpose I/O (GPIO) pins. The STAC920 also provides a single ended CD input for compatibility with DRM solutions and to support legacy OS issues.

The STAC9220 integrates a headphone amplifier which is available on Ports A and D. The headphone amplifier is switchable between these two outputs for increased flexibility, enhanced user experience, and reduced implementation costs. An additional headphone is supported on Port F.

The Universal Jack capabilities allow the CODEC to detect when audio devices are connected to the CODEC, and to allow the CODEC to be reconfigured to support these devices regardless of which port they are plugged into the system. SPDIF input sensing is also supported. The fully parametric IDT SoftEQ can be initiated upon headphone jack insertion and removal for protection of notebook speakers.

Note: The Jack Detect circuit and component selection are critical for accurate detection of audio jacks on individual ports. Please see the IDT STAC922x reference design for circuit implementation details.

The STAC9220 operates with a 3.3 V digital supply and is available in either 5 V analog supply or 3.3 V analog supply options.

The STAC9220 is available in a 48-pin LQFP package. The 48-pin LQFP is only available in the Environmental package (Pb-free).

The STAC9220 is supported with IDT's high quality software solutions which include drivers for all major Windows operating systems from Microsoft, parametric SoftEQ, and Digital Rights Management. Third party plug-in capability is easily achieved with the IDT Kernel Processing Interface, to support high-valued, third party technologies like SRS WOW®, Knowles® Microphone Beam Forming, Waves MaxxBASS®, Dolby Headphone®, Dolby ProLogic II® and Dolby Virtual Speaker® and more.

2. CHARACTERISTICS

2.1. Electrical Specifications

2.1.1. Absolute Maximum Ratings

Stresses above the ratings listed below can cause permanent damage to the STAC9220. These ratings, which are standard values for IDT commercially rated parts, are stress ratings only. Functional operation of the device at these or any other conditions above those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods can affect product reliability. Electrical parameters are guaranteed only over the recommended operating temperature range.

Item	Pin	Maximum Rating
Analog maximum supply voltage	AVdd	6 Volts
Digital maximum supply voltage	DVdd	5.5 Volts
VREFOUT output current		5 mA
Voltage on any pin relative to ground		Vss - 0.3 V to Vdd + 0.3 V
Operating temperature		0^{o}C to +70^{o}C
Storage temperature		-55 ^{o}C to +125 ^{o}C

ESD: The STAC9220 is an ESD (electrostatic discharge) sensitive device. The human body and test equipment can accumulate and discharge electrostatic charges up to 4000 Volts without detection. Even though the STAC9220 implements internal ESD protection circuitry, proper ESD precautions should be followed to avoid damaging the functionality or performance.

4. DETAILED DESCRIPTION

4.1. Audio Jack Presence Detect

SENSE_A pin is used to detect the presence of plugs in ports A, B, C, and D. SENSE_B pin is used to detect the presence of plugs in ports E and F. Refer to the reference design for port detect circuitry. Select the precision of the resistor used as follows.

Table 4. Audio Jack Presence Detect

Nominal Voltage (+-5%)	Resistor Tolerance Sense A (If port D is used)	Resistor Tolerance Sense A (If port D is not used)	Resistor Tolerance Sense B (For ports E and F)
5V	1%	1%	1%
4.5V	1%	1%	1%
4V	0.50%	1%	1%
3.3V	0.10%	1%	1%

4.2. SPDIF Output

SPDIF Output can operate at 44.1 KHz, 48 KHz and 96 KHz, as defined in the Intel High Definition Audio Specification, with resolutions up to 24 bits. This insures compatibility with all consumer audio gear and allows for convenient integration into home theater systems and media center PCs.

4.3. Universal Jacks™

IDT's Universal Jacks™ technology allows for the greatest flexibility in board design and implementation. For the STAC9220 the Universal Jacks™ capabilities are as follows[1]:

- Pins 39/41can be used for[2]:
  - Headphone Out
  - Line Out
  - Line In
  - Microphone with 0/10/20/30/40dB Microphone boost[3]
- Pins 35/36 can be used for[2]:
  - Headphone Out
  - Line Out
  - Line In
  - Microphone with 0/10/20/30/40dB Microphone boost[3]
- Pins 23/24 can be used for:
  - Line Out
  - Line In
  - Microphone with 0/10/20/30/40dB Microphone boost[3]
- Pins 21/22 can be used for:
  - Line Out
  - Line In
  - Microphone with 0/10/20/30/40dB Microphone boost[3]
- Pins 16/17 can be used for:
  - Headphone Out
  - Line Out
  - Line In
  - Microphone with 0/10/20/30/40dB Microphone boost[3]
- Pins 14/15 can be used for:
  - Line In
  - Microphone with 0/10/20/30/40dB Microphone boost[3]

Note[1]: On the STAC9220 only one function can be selected on each pin pair at a time. For example, a pin pair cannot be configured as an input and output at the same time. Configuration can be changed at any time.

Note[2]: Headphone capabilities are provided on pins 39/41 and 35/36, but one should not put headphone loads on both sets of pins at the same time.

Note[3]: 40dB Microphone boost is not recommended.

The HD Audio spec states that the beep tone frequency: F = (48 KHz HD Audio SYNC rate) / (4*Divider) producing tones from 47 Hz to 12 KHz (logarithmic scale). This part generates tones with frequency: F = 48000 * (257 - Divider) / 1024 yielding a linear range from 12 KHz to 93.75 Hz in steps of 46.875 Hz. If JackSenseVSR[Rate2x], then the beep tones generated have frequency: F = 48000 * (513 - Divider) / 1024 yielding a range of 24 KHz to 12093.75 Hz in steps of 46.875 Hz.

7. ORDERING INFORMATION

7.1. STAC9220 Part Order Numbers

The +4 V Analog voltage operation is supported by the +5 V version of the STAC9220.

Table 354. STAC9220 Ordering Information

Part Order Number	Voltage	DAC SNR	Pkg Pins
STAC9220X5TAEyyX	5 V / 4 V	95dB	48 LQFP
STAC9220X3TAEyyX	3.3 V	95dB	48 LQFP

NOTE: When ordering these parts the “yy” will be replaced with the CODEC revision. Add an “R” to the end of any of these part numbers for delivery on Tape and Reel. The minimum order quantity for Tape and Reel is 2,000 units for both package options.
